## NAME

visudo - edit the sudoers file

# SYNOPSIS

visudo [-chqsV] [[-f] sudoers]

## DESCRIPTION

**visudo** edits the *sudoers* file in a safe fashion, analogous to vipw(8). **visudo** locks the *sudoers* file against multiple simultaneous edits, provides basic sanity checks, and checks for parse errors before installing the edited file. If the *sudoers* file is currently being edited you will receive a message to try again later.

**visudo** parses the *sudoers* file after editing and will not save the changes if there is a syntax error. Upon finding an error, **visudo** will print a message stating the line number(s) where the error occurred and the user will receive the "What now?" prompt. At this point the user may enter 'e' to re-edit the *sudoers* file, 'x' to exit without saving the changes, or 'Q' to quit and save changes. The 'Q' option should be used with extreme caution because if **visudo** believes there to be a parse error, so will **sudo** and no one will be able to run **sudo** again until the error is fixed. If 'e' is typed to edit the *sudoers* file after a parse error has been detected, the cursor will be placed on the line where the error occurred (if the editor supports this feature).

There are two *sudoers* settings that determine which editor **visudo** will run.

editor A colon (':') separated list of editors allowed to be used with **visudo**. **visudo** will choose the editor that matches the user's SUDO\_EDITOR, VISUAL or EDITOR environment variable if possible, or the first editor in the list that exists and is executable. Note that **sudo** does not preserve the SUDO\_EDITOR, VISUAL or EDITOR environment variables unless they are present in the *env\_keep* list or the *env\_reset* option is disabled in the *sudoers* file. The default editor path is *vi* which can be set at compile time via the --with-editor configure option.

env\_editor

If set, **visudo** will use the value of the SUDO\_EDITOR, VISUAL or EDITOR environment variables before falling back on the default editor list. Note that **visudo** is typically run as root so this option may allow a user with **visudo** privileges to run arbitrary commands as root without logging. An alternative is to place a colon-separated list of "safe" editors int the *editor* variable. **visudo** will then only use SUDO\_EDITOR, VISUAL or EDITOR if they match a value specified in *editor*. If the *env\_reset* flag is enabled, the SUDO\_EDITOR, VISUAL and/or EDITOR environment variables must be present in the *env\_keep* list for the *env\_editor* flag to function when **visudo** is invoked via **sudo**. The default value is *on*, which

can be set at compile time via the --with-env-editor configure option.

The options are as follows:

-c, --check Enable *check-only* mode. The existing *sudoers* file (and any other files it includes) will be checked for syntax errors. If the path to the *sudoers* file was not specified, visudo will also check the file owner and mode. A message will be printed to the standard output describing the status of *sudoers* unless the -q option was specified. If the check completes successfully, visudo will exit with a value of 0. If an error is encountered, visudo will exit with a value of 1.

### -f sudoers, --file=sudoers

Specify an alternate *sudoers* file location, see below. As of version 1.8.27, the *sudoers* path can be specified without using the -f option.

- -h, --help Display a short help message to the standard output and exit.
- -q, --quiet Enable *quiet* mode. In this mode details about syntax errors are not printed. This option is only useful when combined with the -c option.
- -s, --strict Enable *strict* checking of the *sudoers* file. If an alias is referenced but not actually defined or if there is a cycle in an alias, **visudo** will consider this a parse error. Note that it is not possible to differentiate between an alias and a host name or user name that consists solely of uppercase letters, digits, and the underscore ('\_') character.

# -V, --version

Print the visudo and sudoers grammar versions and exit.

A *sudoers* file may be specified instead of the default, */etc/sudoers*. The temporary file used is the specified *sudoers* file with ".tmp" appended to it. In *check-only* mode only, '-' may be used to indicate that *sudoers* will be read from the standard input. Because the policy is evaluated in its entirety, it is not sufficient to check an individual *sudoers* include file for syntax errors.

# Debugging and sudoers plugin arguments

**visudo** versions 1.8.4 and higher support a flexible debugging framework that is configured via Debug lines in the sudo.conf(5) file.

Starting with **sudo** 1.8.12, **visudo** will also parse the arguments to the *sudoers* plugin to override the default *sudoers* path name, UID, GID and file mode. These arguments, if present, should be listed after the path to the plugin (i.e., after *sudoers.so*). Multiple arguments may be specified, separated by white

space. For example:

Plugin sudoers\_policy sudoers.so sudoers\_mode=0400

The following arguments are supported:

### sudoers\_file=pathname

The *sudoers\_file* argument can be used to override the default path to the *sudoers* file.

#### sudoers\_uid=uid

The *sudoers\_uid* argument can be used to override the default owner of the sudoers file. It should be specified as a numeric user-ID.

#### sudoers\_gid=gid

The *sudoers\_gid* argument can be used to override the default group of the sudoers file. It must be specified as a numeric group-ID (not a group name).

#### sudoers\_mode=mode

The *sudoers\_mode* argument can be used to override the default file mode for the sudoers file. It should be specified as an octal value.

For more information on configuring sudo.conf(5), please refer to its manual.

### **ENVIRONMENT**

The following environment variables may be consulted depending on the value of the *editor* and *env\_editor sudoers* settings:

SUDO_EDITOR	Invoked by <b>visudo</b> as the editor to use
VISUAL	Used by visudo if SUDO_EDITOR is not set
EDITOR	Used by visudo if neither SUDO_EDITOR nor VISUAL is
<b>FILES</b> /etc/sudo.conf	Sudo front end configuration
/etc/sudoers	List of who can run what
/etc/sudoers.tmp	Default temporary file used by visudo

set

### DIAGNOSTICS

In addition to reporting sudoers parse errors, visudo may produce the following messages:

sudoers file busy, try again later. Someone else is currently editing the *sudoers* file.

/etc/sudoers: Permission denied

You didn't run visudo as root.

you do not exist in the passwd database

Your user-ID does not appear in the system passwd database.

Warning: {User,Runas,Host,Cmnd}\_Alias referenced but not defined

Either you are trying to use an undeclared {User,Runas,Host,Cmnd}\_Alias or you have a user or host name listed that consists solely of uppercase letters, digits, and the underscore ('\_') character. In the latter case, you can ignore the warnings (**sudo** will not complain). The message is prefixed with the path name of the *sudoers* file and the line number where the undefined alias was used. In -s (strict) mode these are errors, not warnings.

Warning: unused {User,Runas,Host,Cmnd}\_Alias

The specified {User,Runas,Host,Cmnd}\_Alias was defined but never used. The message is prefixed with the path name of the *sudoers* file and the line number where the unused alias was defined. You may wish to comment out or remove the unused alias.

Warning: cycle in {User,Runas,Host,Cmnd}\_Alias

The specified {User,Runas,Host,Cmnd}\_Alias includes a reference to itself, either directly or through an alias it includes. The message is prefixed with the path name of the *sudoers* file and the line number where the cycle was detected. This is only a warning unless **visudo** is run in **-s** (strict) mode as **sudo** will ignore cycles when parsing the *sudoers* file.

unknown defaults entry "name"

The sudoers file contains a Defaults setting not recognized by visudo.

### AUTHORS

Many people have worked on sudo over the years; this version consists of code written primarily by:

Todd C. Miller

See the CONTRIBUTORS file in the **sudo** distribution (https://www.sudo.ws/contributors.html) for an exhaustive list of people who have contributed to **sudo**.

# CAVEATS

There is no easy way to prevent a user from gaining a root shell if the editor used by **visudo** allows shell escapes.

## BUGS

If you feel you have found a bug in **visudo**, please submit a bug report at https://bugzilla.sudo.ws/

## SUPPORT

Limited free support is available via the sudo-users mailing list, see https://www.sudo.ws/mailman/listinfo/sudo-users to subscribe or search the archives.

## DISCLAIMER

**visudo** is provided "AS IS" and any express or implied warranties, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose are disclaimed. See the LICENSE file distributed with **sudo** or https://www.sudo.ws/license.html for complete details.
